Statement on the Use of Generative AI

Edward A. Varvak, University of Chicago

Research. No generative AI was used in my first paper, *The Monodromy of Compact Lagrangian Fibrations*. For my more recent preprint, *The Mumford–Tate group of a very general Lagrangian fiber*, I used Gemini 3.1 Pro to proofread the manuscript and to help locate references. The arguments and proofs are my own, and no part of the paper was written by AI.

Application materials. I wrote my research statement and publication list entirely myself, and used AI only to check them for typos. My teaching statement, cover letter, and generative AI statement were partially written by Claude Opus 5.5. I edited all three, and I take full responsibility for all of their contents.
