November 7, 2026

Dear Members of the Hiring Committee,

I am a graduate student at the University of Chicago, working in complex algebraic geometry and Hodge theory under the direction of Benjamin Bakker, and I expect to receive my Ph.D. in May 2027. I am applying for the Tamarkin Assistant Professorship (BrownMath-TAP2027). My research concerns the monodromy and Hodge theory of Lagrangian fibrations on hyper-Kähler and other symplectic varieties. At Brown, I would be particularly interested in working with Brendan Hassett and Nicole Looper.

I would contribute to Brown's community mainly through teaching and mentoring. I have taught since 2022, as a teaching assistant at the University of Illinois Chicago (UIC) and, this fall, as the lecturer for my own section of Calculus II at the University of Chicago. Many of my students take these courses to meet a requirement and arrive unsure of their ability, and I focus on making sure they can follow the reasoning rather than memorize procedures. Outside the classroom, I have organized graduate seminars and reading groups, and I plan to continue doing so at Brown. My own start in research was an undergraduate thesis supervised by a postdoc, and I would also like to offer Brown undergraduates the same through reading projects in algebraic geometry.

Along with the AMS Standard Cover Sheet, I include my curriculum vitae, research and teaching statements, and publication list. Research letters will come from Benjamin Bakker (Chicago), Radu Laza (Stony Brook), İzzet Coşkun (UIC), and Valentino Tosatti (Courant), and a teaching letter from McKinley Meyer (UIC). Thank you for your consideration.

Sincerely,

Edward A. Varvak
