November 11, 2026

Dear Members of the Hiring Committee,

I am a graduate student at the University of Chicago, working in complex algebraic geometry and Hodge theory under the direction of Benjamin Bakker, and I expect to receive my Ph.D. in May 2027. I am applying for a Research Assistant Professorship at the Simons Center for Geometry and Physics beginning in Fall 2027. My research concerns the monodromy and Hodge theory of Lagrangian fibrations on hyper-Kähler and other symplectic varieties, as well as moduli spaces of abelian varieties and their Mumford–Tate groups.

I hope to take part in the Simons Center's activities in geometry and mathematical physics, including its workshops on Hodge theory, hyper-Kähler geometry, and Higgs bundles. I would also be happy to help organize workshops and programs there. I would be particularly interested in working with Samuel Grushevsky at the Simons Center, and with Radu Laza, Mark Andrea de Cataldo, Christian Schnell, and Ljudmila Kamenova at Stony Brook University.

Along with this letter, I include my AMS cover sheet, curriculum vitae, publication list, research statement, and teaching statement. Research letters will come from Benjamin Bakker (Chicago), Radu Laza (Stony Brook), İzzet Coşkun (UIC), and Valentino Tosatti (Courant), and a teaching letter from McKinley Meyer (UIC). Thank you for your consideration.

Sincerely,

Edward A. Varvak
